

# TTM4205 reference group meeting on 17-09-2025

**Attendees:** Tjerand, Caroline, Tom, Jo, and Anders

## **Topics that we discussed:**

- Lectures
  - They are generally good, but we sometimes go too quick through new and complex algorithms. Use visualizations or pseudocode when possible.
  - It is good to repeat information from earlier so that it is fresh in mind.
  - Have another look at the ECDSA attack and LLL slides for next year.
  - Discussions are good for thinking about problems and help each other.
  - We should encourage questions during the break about difficult matters.
  - Quiz in the start and/or at the end of the lectures? Prizes? Let us see...
- Exercise class
  - Few people but keep as is for now. There might be more people for the lab. Good to have a place to ask any questions about the assignments.
  - New versions of Chat GTP are probably helping many with problems...
  - It is generally good to have exercise class after lectures (but it is Friday...)
- Assignments
  - Much work but good have it all available already and know what to do.
  - The level of difficulty is fair and balanced. Should not be changed (now).
- Ed Forum
  - Nice to have, but it would be good to send a reminder now and then.
